442/394

ABSTRACT:

A composite panel including a fibrous glass board and foamed-in-place plastic foam has a perforated sheet at the foam-fiberglass interface, there being at least two holes per square inch in the perforated sheet, the diameter of the holes being less than 0.06 of an inch, and the amount of open area represented by the holes being less than 1.5 percent of the total area of the sheet.

428/537.1

ABSTRACT:

A structural sandwich for use as a truck, trailer, van or intermodal container wall and method of making the same. The sandwich comprises a fiberglass reinforced plywood plastic unit having one or both facings which are in the form of a sheet or film of a high-impact, weather-resistant, low-haze, non-brittle, substantially non-porous acrylic composition, the unit being made into an integrated sandwich of 20 foot lengths or more by an efficient vacuum molding method.

Wiegand; Donald E.	Minneapolis	MN	N/A	N/A

US-CL-CURRENT: 442/370, 156/285, 156/306.6, 156/308.4, 428/139, 428/319.9,
428/76, 428/910, 442/394

ABSTRACT:

A reinforced low density thermoplastic foam sheet is disclosed. The sheet is a laminate comprising outer laminae of low density thermoplastic foam and a thermoplastic film having about the same tackifying temperature as the foam and a central layer comprising a reinforcing net or net-like structure.

442/221, 442/370

ABSTRACT:

The panel (10) has a rigid foam layer (12) of synthetic organic polymeric foam, a protective weathering layer (14) of thermoplastic sheet material and a generally flexible backer layer (16) of stereoreticulate material interposed between the foam and weathering layers. Interstices (30) of the backer layer (16) adjacent the foam layer (12) are filled with the resin of the foam layer (12) providing a physical bond and a protective substrate (32) for the foam layer. The weathering layer (14) may be adhered to the backer layer (34) by application of heat.

442/255, 442/295, 442/381, 442/412, 52/169.14

ABSTRACT:

A flexible or rigid panel, and method of making the panel, useful as a water barrier including an intermediate layer of a water-swellable colloidal clay, such as bentonite, sandwiched between two layers of sheet material, such as woven or non-woven fabric, or paperboard, wherein at least one of the sheet material layers has a water-soluble coating material covering substantially the entire outer surface of the sheet material layer. The water-soluble coating is a material that dissolves upon a predetermined water contact period, having a controlled, predetermined water-solubility so that the intermediate water-swellable clay layer is protected against hydration during installation.

ABSTRACTED-PUB-NO: DE 1224919A

BASIC-ABSTRACT:

Forming a mouldable rigid felted fibre panel of uniform density, thickness and structure, comprises forming a mat having uniform thickness and a low density in the range from 1 to 3 pounds per cubic foot from the solid contents of an air-suspension comprising feltable fibres and a resinous binder continuously pneumatically deposited and felted on a moving foraminous conveyor, conditioning said mat by subjecting the mat to a hot gaseous environment for a time sufficient to adjust the moisture content in the range of from 8-15% and the internal temp. 90 deg.F. to 200 deg.F.

INT-CL (IPC): E04B 1/84; G10K 11/16

ABSTRACTED-PUB-NO: CA 2214302A

BASIC-ABSTRACT:

The insulation device comprises at least two two-part strata, and each two part stratum has a fibrous insulation layer and sound reflecting barrier layer, with fasteners attached to at least one of the two-part strata to enable the insulation device to be fastened together when folded around an article to be insulated, and includes a protective outer covering. The two-part stratum comprises a layer of asphalt and fibre glass insulation layer.

Each fibreglass insulation layer has a density within the range of about 0.5 pounds per cubic foot (8 kg per cubic metre) to about 10 pounds per cubic foot (160 kg per cubic metre), and a layer of asphalt has thickness within the range of about 0.025 mm to about 0.15 mm. The fasteners may be Velcro (RTM) fasteners. The device is diaper-shaped, and each stratum is laminated to another two-part stratum.

USE - As acoustical insulation for office panels, appliances automotive applications, and heating, ventilating and air conditioning equipment.
